High Level Skills you should think about to take your work to the next level:

- ✓ Plan your project before you start
- ✓ Don't accept second best
- ✓ Google is your friend if you get stuck
- ✓ Take your time to get it right!

Top Tips

In Photoshop, you can use letters on the keyboard to quickly access certain tools

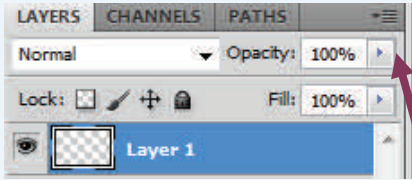

The Tool Bar is down the left hand side and it allows you to choose a tool.

If you see a tool with a little black tag on the bottom right, it means that you can access more tools by right clicking

You will get an extended list of tools, like the ones on the right

You can select your colour here

Layers allow you to stack images on-top of each other. They also allow you to protect the lower layers

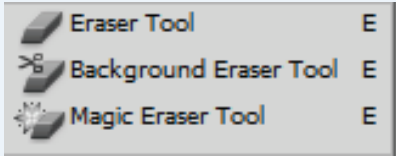

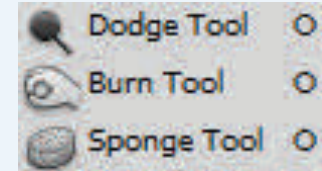

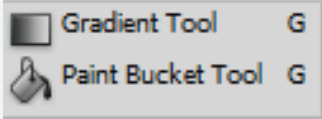

Opacity is how transparent the items on a layer is. Useful for applying filters

You can Create New Layers

You can Delete any Layers

There is lots of information out there on how each of these features work—as already mentioned—Google is your friend!

However, there is no better way to truly understand what they do until you play around with them

That's right, just take an image and apply some of the features to it and see what you can come up with
